### A. Packaging materials.

All around us we use materials to 'package' substances. (Store or put things in)  
 In class you will have seen a selection of packaging materials like in the picture below:

Select **five** different types of packaging and for each one, name the material used and give a reason for that material being used. Put your answers in the table below

<b>Packaging</b>	<b>Material used</b>	<b>Substance stored</b>	<b>Reason</b>

From your materials selected you should be able to classify them into 3 groups. What do you think are the 3 groups?

1. \_\_\_\_\_ 2. \_\_\_\_\_ 3. \_\_\_\_\_
